The Brand Gardeners Trust™

Time for a Refreshing Change

Here's to another banner year with an incredibly strong interest in gardening – especially among new gardeners. Ten years ago no one would have imagined having two back-to-back seasons with the demand we've experienced. So where do we go from here?

We look ahead to 2022 knowing we can depend on the tried and true – plants that gardeners refuse to go a season without. But then, we add in new varieties that take the phrase 'heat tolerance' and garden performance to a completely new level. New gardeners have gained confidence and will be looking for something different to try. So, let's make it even easier for every gardener by offering plants in gorgeous combination recipes that deliver a broader range of colors that will have gardeners searching far and wide.

To help you continue to grow your business, we have created dozens of new hanging basket and upright container recipes. These recipes have been developed by our talented group of designers and tested by our growers to ensure they work. Your next best-selling recipe may be in your hands right now.

What will you grow for 2022 to refresh your passion? We are here to answer your questions, provide suggestions for new recipes, help solve problems and guide you if you're unfamiliar with a variety, or recipe that you are growing for the first time. So, please let us know – how can we help?

How to Design and Grow Premium Recipes that Sell

Container recipes are popular with home gardeners because they offer instant beauty and color in a convenient take-home package. So how do growers create the combinations customers love, and produce them as efficiently as possible? Here are seven tips from Brian Bourdon, Four Star Greenhouse's Senior Manager of Offsites & Crop Supply Chain, who has created hundreds of our most popular recipes.

Pair Plants with Similar Vigor

One of the biggest mistakes people make when designing container recipes is not matching plants with comparable vigor ratings. When a high vigor plant like Supertunia Vista® Bubblegum® is paired with plants that are less aggressive, it quickly overtakes the other plants and sets the combination off balance. But when it is grown with other high vigor plants, the recipe grows perfectly together.

We've tested and rated all of our annual plants for vigor using a scale of 1 to 4. Pay close attention to these ratings when designing your own recipes. If you are following one of our named recipes, we've already factored vigor into account.

Since Supertunia Mini Vista® petunias, Angelface® Cascade Blue angelonia and Diamond Snow® euphorbia all share a vigor 3 rating, they are equally compatible in this Crushed Ice recipe.

Match Cultural Needs

Growers are savvy at pairing plants with similar needs together in production to increase efficiency. The same rule applies when matching up plants in container recipes. Factors to consider include: lighting and shade requirements, moisture, nutrients, growing temperature and heat tolerance. Most annuals will perform well at a pH of 5.8-6.2, so this detail is less critical to examine.

This Bayberry recipe works well because all of the components prefer to dry down a bit between waterings and need high light conditions.

Stretch the Imagination

Once your top-selling recipes are established, let's think beyond the standard 3-variety thriller-filler-spiller formula and create premium complex container recipes with higher price points. These can be sold in much larger, high quality decorative containers as cash and carry items.

Container recipes are trending larger and more complex as people look to create fewer plantings with higher impact for their decks and porches. Choose an unconventional thriller like Heart to Heart caladiums to create a lush look, then surround it with larger fillers and spillers to create a stunning mosaic of color and texture.

In addition to your basic container offerings, grow a few complex recipes at higher price points for premium container sales. In our Sweetest Thing recipe, we paired Heart to Heart® 'White Wonder' caladium with Supertunia Vista® Silverberry petunia, Diamond Frost® and Surefire® Rose begonia.

Follow the Diagram

We provide planting diagrams for all our hanging basket and upright container recipes found in this guide and online. It's important to train your production department to follow these diagrams when transplanting liners into new hanging baskets and upright containers. This will ensure enough liners are used and that they are positioned to achieve the most attractive mix of colors and textures.

Easy Design Formulas

If you're looking for an easy way to combine plants in premium quality hanging baskets and upright containers, the thriller-filler-spiller method continues to be a success. Consumers have come to know and love this formula, too.

There are countless varieties that will work in these types of recipes – the hardest part is narrowing down your choices. Instead of a typical spike or grass, try something different this year and use a sunflower, caladium or canna as your thriller for a more premium finished product.

Color Schematics

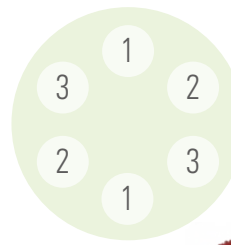

We all know that color sells. While pink and purple rank consistently as consumers' favorite colors, blue also ranks near the top of that list. Color preferences tend to shift through the seasons. While pastel pink is often sought after for spring recipes, bold magenta pink plays prominently in warm season combinations.

To accommodate the color preferences of a broad array of consumers, we've created container recipes in 15 different color schemes. From pastel to patriotic, vibrant mixes to earth tones and more, you'll find over 1,200 container recipe ideas at www.provenwinners.com.

Classic v. Unconventional Pairings

Your design and production staff surely has a list of favorite container recipes they grow beautifully every year. Don't be afraid to substitute in a new color or variety from time to time. We're constantly working to improve even our most popular varieties and significant advancements have come in foundational plants like Superbells Dreamsicle and Supertunia Royal Velvet.

Alongside the traditional recipes you produce each year, try a few unconventional pairings. Growing flowers right alongside fruits and herbs has become more popular as people try to maximize their small gardening spaces. Why not grow strawberries with a caladium? You can show them it's possible.

Following the planting diagram will ensure the container grows full and balanced.

This Beyond the Moon recipe follows the classic thriller-filler-spiller formula.

The soft blue, lilac and chiffon yellow flowers in our Best of Show recipe match the tone of the cool spring season, but go the distance by performing all the way until fall.

Mixing plants you can eat with ornamental flowers in large containers is especially popular with younger gardeners who have limited space.

6 Critical Production Tips

Want to produce lush, flower-covered container recipes like those you see in this guide?
Lead growers from Pleasant View Gardens share their top tips.

1 The Key to Success

Starting with exceptional quality liners is the most important thing you can do to get your container recipes off to a great start. Even if you encounter issues along the way as you produce your crop, they will be far easier to navigate if you start with quality liners. Your propagator will be happy to work with you to determine the best liner size and delivery date to fit your production model.

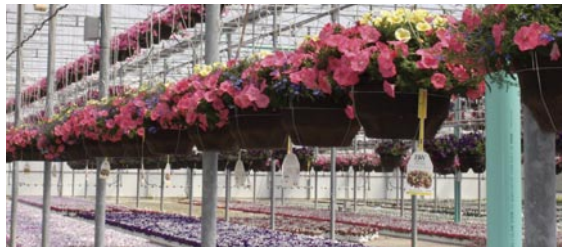

Starting with robust liners is the key to success in growing premium quality container recipes. Work with your propagator to determine the best liner size to fit your needs.

2 Start Your Liners Off Right

Minimizing stress on newly planted liners will avoid complications down the road. As a standard practice, we apply a preventative broad spectrum fungicide drench one week after transplant to all newly transplanted liners. This protects their roots from potential attacks.

3 Moderate Your Watering

It is very easy to overwater newly transplanted liners, so take care not to create this unnecessary stress. During the first few weeks after transplant, the root system is still small and does not yet extend down the bottom of the container. At this time, frequent but low volume water applications are required to provide the liners just the right amount of water they need without becoming overly wet.

Drip lines allow maximum control over irrigation, ensuring liners are not over- or under-watered in production.

4 Build a Strong Foundation

When your liners are young and are newly transplanted into hanging baskets, focus on developing a strong root system for the plants. Timing is key. We closely monitor the growing temperature, pH and EC of the growing media, and fertility while the plants are becoming established in the container.

5 Trimming and Shaping

As the plants are growing, a series of pinches and/or PGR applications are used to shape the plants in the containers. For many plants, we trim around the edges of the containers as needed, prior to spacing uprights and hanging the baskets. PGR rates are listed on our website for all of the plants we offer.

Trimming plants around the edges of the containers before spacing will make it easier to lay them out properly on the floor.

6 Feed Those Plants!

Premium quality hanging baskets and upright containers will fly out of inventory, so be sure you are feeding those hungry plants so they reach their full potential. We've developed four primary and four specialty professional fertilizer products that will help minimize and correct pH-related issues in your production greenhouses. We'll help you select the right product for your situation based on your water test results. All of our fertilizers contain minors and 100% EDDHA as the source of iron.

The eight professional fertilizers we offer can be used with every irrigation. The formula you will use is based on your specific water conditions or needs.

The New 2022 National Recipes

Packed with our top-selling, most distinctive varieties, our National Recipes have been proven in trials to work. We'll take care of driving consumer demand while you watch them fly out of inventory.
