

Annual Collection

ANNUAL COLLECTION

SUNSATIA® *Nemesia*

🌱🌱🌱 15-25cm (6-10") Vigor: 2

This is the collection that epitomizes the art and science of plant breeding. Very showy and dramatic in borders, hanging baskets, and containers. All varieties have a full, attractive habit and are ideal for early spring. Sunsatia are exceptionally cold tolerant and incredibly colorful.

SUNSATIA® Cranberry Red *Nemesia* ^{INNEMCRARE} USPPAF CanPBRAF
If you like Sunsatia Blood Orange™, you'll love this matching red selection which exhibits similar increased heat tolerance. It replaces Sunsatia Cranberry this year, with key improvements being a neater, more uniform habit, incredible flower coverage with larger flowers, and sunfast color. New this year.

AWARD WINNER – SUNSATIA® *Nemesia*
10 Awards including: Excellent Rating, Disney Trials; Consumer Top Choice, Cornell-Long Island

Growing Tips for SUNSATIA®

- Grow these plants on the dry side.
- Preventive fungicides are recommended 1 week after transplant.
- High light is required in production.
- Air circulation, proper water management, and good soil porosity are critical.
- Use well-drained media only.
- Requires 150-200 ppm fertilizer for optimal growth.
- In growing group AA (see page 145).

Notes: For all sizes of containers, pinch the liner 1-2 weeks after transplant; for containers larger than 6" and for hanging baskets, trim around the edge of the container as needed prior to spacing or hanging of the baskets. Cold temperatures will also control growth. Sensitive to pythium, phytophthora, and thielaviopsis. Rhizopy and other copper-based fungicides are effective as a preventative application.

Bluebird *Nemesia fruticans*

🌱🌱🌱 25-30cm (10-12") Vigor: 2

An essential annual for spring color bowls, window boxes and landscapes, this cold tolerant annual knows how to start the season off right. Its rich blue, clove-scented blossoms do not require deadheading for continuous bloom. Bluebird's habit is sturdy, compact and well-branched. It has exhibited excellent heat tolerance, blooming well into the summer months.

Growing Tips for Bluebird

- Preventive fungicides are recommended one week after transplant.
- Florel® at 500 ppm is effective at increasing branching.
- Sumagic® at 5 ppm and cold temperatures are effective at controlling growth.
- Requires 150-200 ppm fertilizer for optimal growth.
- In growing group AA (see page 145).

Notes: For all sizes of containers, pinch the liner 1-2 weeks after transplant; for containers larger than 6" and for hanging baskets, trim around the edge of the container as needed prior to spacing or hanging of the baskets.

AWARD WINNERS – Bluebird *Nemesia*

5 Awards including: Top Performer, Michigan State; Best of Breed for Winter, North Carolina State, JC Raulston Arboretum; Superior Rating, Penn State; Top Performer, Ohio State; Best of the Best, University of Georgia

AROMANCE™ Pink *Nemesia fruticans*

🌱🌱🌱 25-46cm (10-18") Vigor: 2

Replacing Opal Innocence® this year is an intensely fragrant selection with larger, brighter pink flowers and increased heat tolerance. In trials, it performed beautifully throughout the summer, even handling heavy summer rains with ease. Watch for more new heat tolerant cultivars to come in this new series in the future. New this year.

Growing Tips for AROMANCE™

- Provide high light levels in production.
- Feed with 150-200ppm N.
- Good water management practices are critical to healthy plant growth.
- A 500ppm application of Florel is effective at increasing branching. It can also be used to schedule flowering; flowers will appear 4 weeks after application.
- In growing group AA (see page 145).

Notes: Removing buds and flowers at transplant isn't necessary but can be beneficial. Treat with a preventative broad spectrum fungicidal drench 1-2 weeks after transplant. Pinch liners 1-2 weeks after transplant if needed. A 5ppm application of Sumagic® and cold temperatures can be used to control growth.

INFINITY® New Guinea Impatiens

LANDSCAPE    25-36cm (10-14") Vigor: 1

Highly recommended alternatives to *I. walleriana*, New Guinea Impatiens have a similar look but with larger, more brilliantly colored blooms that appear from spring through summer without deadheading. All are incredibly versatile, thriving in monoculture and combination containers as well as in landscapes. They are ideal for 4.25 Grande™ and 1.0 Royale™ container production.

Growing Tips for INFINITY®

- Preventive fungicides are recommended one week after transplant.
- Sensitive to high-soluble salts; use 100-150 ppm fertilizer.
- Light shade is optimal for best growth.
- Aggressive scouting and treatment program for thrips are recommended for INSV control. Do not use Medallion® due to severe PGR effect on NGIs.
- Be sure not to overwater while plants are still rooting to the container edge.
- Growing at too cool of a temperature can cause purpling of the foliage and the stunting of growth.
- Yellow foliage is caused by drying the plant down past wilt stage.
- In growing group CC (see page 145).

Notes: No pinching recommended. These varieties are bred to branch well without pinching, which would only delay flowering and result in a less-balanced plant habit. No growth regulators recommended or needed. Winter flowering occurs in Sunbelt states.

CHARMED® Wine *Oxalis regnellii*

   15-41cm (6-16") Vigor: 1

Here's a plant you can grow and sell in multiple displays including St. Patrick's Day, shade collections and as an indoor plant for sunny windowsills. Violet purple, shamrock-shaped leaves form a restrained mound topped with pale pink flowers all season. Easy to mix with other low to medium vigor plants in window boxes and patio pots, and looks great in 4.25 Grande™ containers.

Growing Tips for CHARMED® Wine

- Prefers warmer production temperatures.
- Warm and slightly dry conditions after transplanting speeds root in and growth.
- Light shade is best for optimal growth.
- Shear back if petioles become too long due to low light conditions.
- Use 150-200 ppm fertilizer for optimal growth.
- In growing group BB (see page 145).

Notes: To schedule for St. Patrick's Day, plan on a 4-6 week crop, and supplemental lighting may be needed to keep plant compact for Northern growers. Pinching not needed. PGRs not needed.

AWARD WINNER – CHARMED® Wine Oxalis

2 Awards: Arboretum Approved, Dallas Arboretum; Best of Species, Penn State

Oxalis regnellii ^{JRDXBURWI} USPP17557 Can2949

BRIGHT LIGHTS™ *Osteospermum*

LANDSCAPE 20-30cm (8-12") Vigor: 2

Selected for their nestled branching and fuller, uniform habit that doesn't open up, these are some of the easiest *Osteospermum* to produce. Dual cold and heat tolerance results in a long sales window from spring into fall and through the winter in sunbelt states.

BRIGHT LIGHTS™ Berry Rose *Osteospermum* *** USPPAF CanPBRAF
These electric pink flowers are essential for creating lively spring recipes, displays and promotions. Strong impulse sales are assured with this cheerful daisy. New this year.

BRIGHT LIGHTS™ Purple *Osteospermum* ¹INOSTBLPUR¹ USPPAF CanPBRAF
Royal purple flowers pair perfectly with Berry Rose for spring and summer container recipes. Pair it with jewel tones for fall. New this year.

BRIGHT LIGHTS™ White *Osteospermum* *** USPPAF CanPBRAF
Snow white daisies mix easily with other spring annuals, then continue the show into the summer, fall and winter months in the south. New this year.

Growing Tips for BRIGHT LIGHTS™

- Treat with a preventative broad spectrum fungicidal drench 1-2 weeks after transplant.
- Good air circulation, control of humidity, and good sanitation are critical to crop success.
- Cooler temperatures and high light in production are essential for spring bud set and branching.
- Use 150-200 ppm fertilizer.
- In growing group AB (see page 145).

Notes: Removing the buds and flowers at transplant isn't necessary but can be beneficial.

AWARD WINNER – BRIGHT LIGHTS™ *Osteospermum*

34 Awards including: Top Performer, Jardin Daniel A. Seguin; Top Performer, Penn State; Top Performer, University of Guelph; Top Performer, University Laval; Visitor's Choice, Missouri Botanic Garden

SYMPHONY *Osteospermum*

20-36cm (8-14") Vigor: 2

These interspecific hybrids exhibit improved heat tolerance and are virtually sterile, extending their flowering performance from early spring into the summer months. They are ideal for growing in 4.25 Grande™ containers for spring and fall sales.

Growing Tips for SYMPHONY

- Pinch at transplant only if necessary. If you pinch, use a spray application of fungicide immediately as a preventative measure.
- Requires high light in production.
- Warm and slightly dry conditions after transplanting speeds rooting and growth.
- Use 150-200ppm fertilizer.
- PGRs are not recommended.
- Symphony may be finished outside to tone plants.
- In growing group AB (see page 145).

AWARD WINNER – SYMPHONY *Osteospermum*

5 Awards including: Top Performer, Michigan State University; February Plant of the Month, Dallas Arboretum; One of the Best, Penn State

BOLDLY® Pelargonium

LANDSCAPE   25-30cm (10-12") Vigor: 3

Geraniums are a consumer favorite, and the blooms of Boldly have a dedicated and strong following among gardeners. Their popularity has grown since this interspecific cross between zonal and ivy geraniums joined the Proven Winners brand. With more zonal traits than ivy traits, exceptional heat tolerance, and a mounded habit, Boldly offers beauty and strong garden performance.

AWARD WINNER – BOLDLY® Pelargonium

84 Awards including: Top Performer, Kansas State; Plant of Merit, University of Georgia; Leader of the Pack, North Carolina State; Top Performer, University of Minnesota

Growing Tips for BOLDLY®

- 200-250 ppm fertilizer for optimal growth.
- Requires high light in production.
- Pinching should not be necessary. Apply Cycocel at 750 to 1,000 ppm as needed.
- Apply 350 ppm of Florel® once or twice. First application should be applied 10 to 14 days after transplant. Repeat 5 to 8 days later, if desired. Applications should be stopped 6 to 7 weeks before desired sell date.
- Geraniums are sensitive to iron and magnesium toxicity; soil pH maintained above 6.0 will limit problems.
- In growing group BC (see page 145).

Notes: Treat with preventative broad-spectrum fungicidal drench one week after transplant. Scout crops regularly for disease development. Good air circulation, control of humidity, and good sanitation practices are critical.

Top 50

TIMELESS™ Pelargonium

LANDSCAPE   30-46cm (12-18") Vigor: 2

Timeless geraniums share the same great genetics as their forerunner, Caliente, which are popular with consumers. This interspecific cross between zonal and ivy geraniums exhibits more ivy traits than zonal traits. Available in an array of vibrant colors, they all share exceptional heat tolerance and deliver a strong garden performance. Timeless Pink and Timeless Fire have a more cascading, very well-branched habit while the others in this series are more mounded and compact.

AWARD WINNER – TIMELESS™ Pelargonium

76 Awards including: Best of Breed, North Carolina State; Top Performer, Kansas State; Summer Survivor, Texas A&M

Growing Tips for TIMELESS™

- 200-250 ppm fertilizer for optimal growth.
- Requires high light in production.
- Pinching should not be necessary. Apply Cycocel® at 750 to 1,000 ppm as needed.
- Apply 350 ppm of Florel® once or twice. First application should be applied 10 to 14 days after transplant. Repeat 5 to 8 days later, if desired. Applications should be stopped 6 to 7 weeks before desired sell date.
- Geraniums are sensitive to iron and magnesium toxicity; soil pH maintained above 6.0 will limit problems.
- In growing group BC (see page 145).

Notes: Treat with preventative broad-spectrum fungicidal drench one week after transplant. Scout crops regularly for disease development. Good air circulation, control of humidity, and good sanitation practices are critical.

SUNSTAR™ *Pentas lanceolata*

LANDSCAPE     46-56cm (18-22") Vigor: 2  

Sunstar™ represents a breakthrough new line of genetics for Pentas that have retained their heat tolerance for Southern growers but are also now easier to produce in the North, even without supplemental lighting. Extra-large flower clusters nearly the size of hydrangea blossoms top the well-branched plants which fill 4.25 Grande™ containers fully.

Sunstar Pentas have excellent summer durability, powering through high heat and humidity, and make ideal bedding plants in the South. Since they are produced vegetatively, their flowering performance far exceeds that of seed Pentas. Now available in four colors.

New this year.

SUNSTAR™ Lavender *Pentas* **** USPPAF

SUNSTAR™ Pink *Pentas* **** USPPAF

SUNSTAR™ Red *Pentas* **** USPPAF

SUNSTAR™ Rose *Pentas* 'PEZZ0003' USPP25942

Growing Tips for SUNSTAR™

- Requires high light in production.
- Feed with 100-150ppm N. Calcium and nitrate-based fertilizers help maintain a pH above 6.2. Avoid ammonia-based and acidifying fertilizers in production.
- Peak blooming occurs under long days.
- Good air circulation, control of humidity, good water management practices and proper sanitation are critical to producing healthy plants.
- In growing group CB (see page 145).

Notes: Treat with a preventative broad spectrum fungicidal drench 1-2 weeks after transplant. PGR sprays can be used to control height. Use 2500-5000ppm B-Nine®, 750-1000ppm Cycocel® or 5-10ppm Bonzi®. Scout crop at least once per week for disease development.

SUPERTUNIA® *Petunia*

LANDSCAPE     15-30cm (6-12")   all Vigor: 3 except Giant Pink and Supertunia® Vistas: Vigor: 4

The Best Petunia. Period. For incredible color and season-long performance, choose Supertunia. Whether you're using them to create extraordinary hanging baskets, upright combos or in landscapes, you can expect an exceptional show of color from planting until frost. Supertunias are self-cleaning – no deadheading necessary – and grow with remarkable vigor, petal substance and disease resistance. You won't find a more outstanding petunia.

SUPERTUNIA® RASPBERRY RUSH™
Petunia 'BBTUN91601M2' USPPAF CanPBRAF

This dynamite new bicolor, patterned petunia is destined to become one of our top sellers. Lush plants become blanketed in vibrant raspberry pink and white flowers that start early and last all season. It is stunning in monoculture baskets and vigorous in landscapes. New this year.

SUPERTUNIA® Sharon *Petunia* 'BBTUN22503' USPPAF CanPBRAF

Our trial managers agree, this is the best double petunia we've ever trialed. It delivers a phenomenal garden performance all season. Pink and white bicolor, star-patterned flowers are produced prolifically starting early in the season and are self-cleaning, avoiding botrytis issues. New this year.

Growing Tips for SUPERTUNIA®

- Requires high light in production.
- 250+ ppm fertilizer. Watch pH and EC levels.
- All "veined" petunias are more sensitive to cold. Keep above 50° F (10° C).
- Day-length neutral varieties need less PGRs. Cold temperatures also control growth.
- Yellow growth tips often indicate an iron shortage in response to too high pH.
- Black Cherry has above average vigor and flowers very early. Grow as bright as possible, space plants well, provide good air movement and avoid high humidity. Grow cool with 65-68°F days and 55-60°F nights. Regular applications of PGRs will help to keep plants more compact and will hold them longer.
- In growing group AA (see page 145).

Notes: For all sizes of containers, pinch the liner 1–2 weeks after transplant; for containers larger than 6" and for hanging baskets, trim around the edge of the container as needed prior to spacing or hanging of the baskets. 10-15 ppm Sumagic® spray or 1-3 ppm Bonzi® drench are effective at controlling growth. Apply as needed. Supertunia Trailing may require higher rates of PGRs.

SUPERTUNIA® Trailing Petunia

LANDSCAPE 10-20cm (4-8") Vigor: 3

Supertunia Trailing petunias are the highlight of combination containers and hanging baskets. As the series name implies, these are strongly trailing plants that can reach an amazing six feet in length by season's end. They have smaller but extremely plentiful blooms and are later to flower, lasting well into fall. We recommend them for mid-May production.

SUPERTUNIA VISTA® Petunia

LANDSCAPE 🌿 🪴 🌞 🌱 30-61cm (12-24") 🦋 🦋 Vigor: 4

The best petunia for landscapes. Hands down.

Supertunia Vista varieties deliver an outstanding performance over the entire season, lasting an extra month in southern states and well into fall in moderate climates. They are bred to flower earlier, grow taller and wider, and grow more vigorously than other Supertunia. Vista Bubblegum has become a legend in its own time, and the other Vistas are well-matched too.

SUPERTUNIA VISTA® SNOWDRIFT™ Petunia ^{BBTUN04401} USPPAF CanPBRAF

Living up to the Supertunia Vista name isn't easy, but Snowdrift is up to the task. It's everything you love about Bubblegum® but in snow white. Huge, vigorous, wide spreading plants are blanketed in self-cleaning flowers from spring into fall. Compared to Silverberry, this plant is larger and its flowers are pure white. New this year.

INTENSIA® Phlox

LANDSCAPE 🌿 🪴 🌞 25-41cm (10-16") 🦋 Vigor: 2

Their heat, drought, and humidity tolerance, sweet fragrance, and rich colors have earned this series a stack of awards – and a special place in the hearts of gardeners throughout the Midwest and South. Intensia grow from early spring through autumn and are wonderful mid-height plants for your premium hanging baskets and containers.

Have You Had Trouble Growing Intensia?

Intensia prefers being dry, and normal greenhouse procedure is to never let the plant dry out. So a good rule of thumb with this plant is that when you think it’s ready to be watered, wait a day.

AWARD WINNER – INTENSIA® Phlox

70 Awards including: Top Pick, Dallas Arboretum; Superior Rating, Disney; Best of the Best, University of Georgia; Exceptional Performer, University of Florida; Best of Species, Penn State

Growing Tips for INTENSIA®

- Requires heat and high light for optimal growth.
- Order for mid-spring production.
- Proper air movement, water management, and good soil porosity are critical.
- Water lightly at planting. Grow warm until roots are established and then grow cool.
- 200-300 ppm fertilizer. When actively growing, increased fertilizer applications may be necessary.
- Can be finished for prime spring season in mixed containers. Mono baskets and small containers can be produced from mid-spring on, if grown properly.
- A preventative fungicidal drench should be done one week after transplant.
- In growing group AB (see page 145).

Notes: For all sizes of containers, pinch the liner 1-2 weeks after transplant; for containers larger than 6" and for hanging baskets, trim around the edge of the container as needed prior to spacing or hanging of the baskets. 5-10 ppm Sumagic® is effective. Cool temperatures are also an effective growth regulator.

MOJAVE® *Portulaca umbraticola*

LANDSCAPE 🌱 10-15cm (4-6") 🦋 Vigor: 2

Capitalize on the succulent trend by offering these colorful flowering cultivars that bloom all summer without deadheading. Large, vivid blossoms that attract pollinators are held above the foliage on trailing stems. Use them in hanging baskets, upright containers and landscapes where they make a drought tolerant groundcover.

Growing Tips for MOJAVE®

- Grow on the dry side to help naturally control growth.
- 100-150 ppm fertilizer for optimum growth.
- Red leaf margins can indicate over-fertilization or extremely high light levels.
- When holding at cool temperatures, be sure to maintain temperatures no lower than 50°F to avoid leaf drop. Some red coloration on leaf margins may appear with cool temperatures. Under cool holding conditions, soil should be dry rather than moderate.
- In growing group BC (see page 145).

Notes: Pinch at 1-2 weeks after transplant if needed. Treat with a preventative broad spectrum fungicidal drench at 1-2 weeks after transplant. Scout crops regularly (at least once a week) for disease development. Good air circulation, control of humidity, and good sanitation practices are critical.

AWARD WINNER – MOJAVE® *Portulaca*

SUNBINI® *Sanvitalia procumbens*

LANDSCAPE 🌱 15-25cm (6-10") Vigor: 2

With its large flowers and more uniform habit, Sunbini is fast to fill out and extra drought-tolerant. Be sure to recommend this one to your landscape customers.

Growing Tips for SUNBINI®

- High light is essential.
- 150 ppm fertilizer for optimal growth.
- Production time decreases when light and temperatures are optimal.
- Grow lean, warm, and dry for best results.
- Do not use any fungicides containing Azole, such as Banrot® and Truban®, as they will stunt the plants.
- In growing group BB (see page 145).

Notes: For all sizes of containers, pinch the liner 1-2 weeks after transplant; for containers larger than 6" and for hanging baskets, trim around the edge of the container as needed prior to spacing or hanging of the baskets. No PGRs needed. Plants are sensitive to Sumagic® but 2500 ppm B-9 is effective if needed.

AWARD WINNER – Sunbini® *Sanvitalia*

6 Awards including: Top Performer, Michigan State; Top Performer, Penn State; Best Varieties, Colorado State University

SUNBINI® *Sanvitalia procumbens* Starbini USPP17869 Can2827

LEMON CORAL® *Sedum mexicanum*

LANDSCAPE 🌱 8-25cm (3-10") Zones 7-11 Vigor: 2

A tough as nails filler for hanging baskets, troughs, combination containers and landscapes, this beautifully textured succulent is very vigorous and drought tolerant. Its lime green to chartreuse foliage pairs well with other vigorous sun loving varieties.

Growing Tips for LEMON CORAL®

- High light levels are required in production.
- Grow in dry to lightly moist soil. Plants are heat and drought tolerant once established.
- 100 - 150 ppm fertilizer for optimum growth.
- Good air circulation, water management practices, control of humidity, and good sanitation practices are critical.
- In growing group BB (see page 145).

Notes: No pinching needed. Naturally forms a very dense mat of lime green foliage. Treat with a preventative broad spectrum fungicidal drench at 1-2 weeks after transplant. Scout crops regularly (at least once a week) for disease development.

AWARD WINNER – LEMON CORAL® *Sedum*

44 Awards including: Top Performer, Colorado State University; Best Drought Tolerant, Tennessee State University; Top Performer, Texas A&M

LEMON CORAL® *Sedum mexicanum*

NEW

UNPLUGGED™ SO BLUE™ *Salvia*

LANDSCAPE    36-61cm (14-24")    Vigor: 2

Similar to Playin' the Blues® but about half its size, this more compact salvia is easy to pair with other medium vigor annuals in container recipes and landscapes. True blue flowers are produced prolifically without deadheading on well-proportioned, heat and humidity tolerant plants from spring into fall. New this year.

Growing Tips for UNPLUGGED™

- Requires high light in production.
- Feed with 150-200ppm N. Using fertilizer high in ammonia can cause excessive vegetative growth and fewer flowers.
- Good water management practices are critical to healthy growth. Avoid overhead watering late in the day.
- Avoid saturated containers; grow slightly on the dry side.
- In growing group AB (see page 145).

Notes: A routine preventative fungicidal spray program is encouraged. This variety's compact early habit makes it perfect for smaller container production. Growth can be controlled using lower temperatures.

UNPLUGGED™ SO BLUE™
Salvia farinacea 'G14251' USPPAF Can/PBRAAF

NEW

ROCKIN'® *Salvia*

LANDSCAPE    Vigor: 4

Gardeners are looking for plants to draw in pollinators and salvias work like a charm. Hummingbirds are highly attracted to the extra-large flowers of Rockin' Deep Purple and Fuchsia, while butterflies and bees enjoy Rockin' Playin' the Blues. Each member of this series is unique, but all share a refined habit and strong heat tolerance. They are spectacular in the landscape and make impressive thrillers in large containers.

ROCKIN'® BLUE SUEDE SHOES™ *Salvia* 'BBSAL01301' USPPAF Can/PBRAAF

Rare cool blue flowers with black calyxes are a breeding breakthrough for this *Salvia guaranitica* hybrid. Its refined, well-branched habit presents beautifully in containers at retail. New this year.

Growing Tips for ROCKIN'®

- Requires high light in production.
- Good air circulation and water drainage are important. Use a well-drained soil mix.
- A routine preventative broad spectrum fungicidal spray program is encouraged.
- 150-200 ppm N. Be careful to not overfertilize. Using fertilizer high in ammonia can cause excessive vegetative growth and lack of flowers.
- Growth can be controlled using B-9 at 2,500 to 3,750 ppm.
- Grow in 4.25 Grande™ for early season sales and in 1.0 Royale™ containers for bigger impact.
- In growing group AB. (see page 145).

Notes for ROCKIN'® PLAYIN' THE BLUES®:

Apply growth regulators as needed for height control.

Notes for ROCKIN'® Deep Purple, Fuchsia and 'Golden Delicious':

Compact early habit is great for container production. Pinch at 1-2 weeks after transplant if needed. Growth can be controlled using lower temperatures.

AWARD WINNERS – ROCKIN'® *Salvia*

WHIRLWIND® *Scaevola aemula*

LANDSCAPE 🌱 🌞 20-36cm (8-14") Vigor: 3

For low maintenance color and season-long performance in the toughest conditions, choose Whirlwind. Their fan-shaped flowers may appear delicate, but these plants have their roots in rugged Western Australia bush country, so they thrive in heat, humidity and drought conditions. All three cultivars are well-branched and fill out containers fully. Their landscape performance is simply stellar.

WHIRLWIND® Blue Improved *Scaevola aemula* **** USPPAF CanPBRAF
A real standout in our trials, this improved selection displays beautiful branching, increased flower coverage and excellent vigor. It is a perfect match for others in the series. Improved this year.

Growing Tips for *Scaevola*

- Requires high light in production.
- 150-200 ppm fertilizer.
- Prefers warmer production temperatures.
- Australian plants prefer to have little or no phosphorous added.
- Sensitive to cold temperatures but makes a great spring and summer sales item.
- In growing group BA (see page 145).

Notes: For all sizes of containers, pinch the liner 1-2 weeks after transplant; for containers larger than 6" and for hanging baskets, trim around the edge of the container as needed prior to spacing or hanging of the baskets. Sumagic® at 2-5 ppm has been effective at controlling growth.

SNOWSTORM® *Sutera cordata* (Bacopa)

🌱 🌞 10-25cm (4-10") Vigor: 2
Snowstorm® Giant Snowflake®: Vigor: 3

Our *Sutera* varieties show what happens when you start with the best genetics, then continually improve them. In hanging baskets and containers, *Sutera*'s glimmering, star-shaped flowers add beauty and texture, but its delicate looks are backed by durability and vigor.

SNOWSTORM® Blue Improved *Sutera cordata* 'WINSUSNOBL' USPPAF CanPBRAF
This improved cultivar features an upgraded flowering performance, larger lavender blue flowers and improved vigor. Improved this year.

SNOWSTORM® GLACIER BLUE™ *Sutera cordata* 'WINSUSNOGL' USPPAF CanPBRAF
A color expansion for the series, bearing large, light blue flowers. The most heat tolerant of the bunch. New this year.

SNOWSTORM® Pink Improved *Sutera cordata* 'INSUTSNPIM' USPPAF CanPBRAF
An improved cultivar featuring increased vigor and larger, light pink flowers on well-rounded plants. Improved this year.

SNOWSTORM® Rose *Sutera cordata* **** USPPAF CanPBRAF
A unique color for *Sutera*, bearing large, bright rose pink flowers that are notably darker than Snowstorm Pink. New this year.

SNOWSTORM® SNOW GLOBE® Improved *Sutera cordata* 'WINSUSNOGL' USPPAF CanPBRAF
This improved cultivar features improved vigor, an upgraded spring and summer flowering performance, larger flowers and a rounded habit. Improved this year.

Growing Tips for SNOWSTORM®

- High light in production is essential in early season. Light shade is required for summer production.
- 150-200 ppm fertilizer for optimal growth.
- You must keep Giant Snowflake under control, especially under dark weather conditions. It should be treated with 500-750 ppm of B-9.
- Treat with preventative broad spectrum fungicidal drench one week after transplant.
- In growing group BA (see page 145).

Notes: Pinch as needed or to shape plants. Do not allow plants to dry out as they will drop both buds and flowers causing the plants to cycle out of bloom for several weeks.

AWARD WINNER – SNOWSTORM® *Sutera*

COLORBLAZE® *Solenostemon scutellarioides* (Coleus)

With vibrant color and season-long performance, the ColorBlaze collection of coleus is a must-have for your spring lineup. These foliage plants are bold, versatile, easy to grow, and extremely popular with gardeners. All are late-flowering varieties that hold their form throughout the season. They are tolerant of varying light conditions and are among the fastest-selling plants in any program.

COLORBLAZE® WICKED HOT™ *Solenostemon scutellarioides*

This full, well-branched coleus features frilly textured leaves in warm sunset orange hues with a wine red cast on its stems and undersides. It has shown good resistance to downy mildew. New this year.

COLORBLAZE® WICKED WITCH™ *Solenostemon scutellarioides*

This wicked good coleus features a full, well-branched habit that presents perfectly in containers and exhibits good resistance to downy mildew. Deep burgundy leaves with frilled, lime green edges are electrifying. New this year.

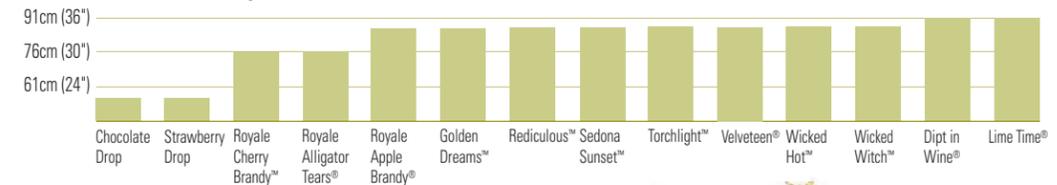

AWARD WINNER – COLORBLAZE® *Solenostemon*

562 Awards including: Top Performer, Ohio State; Leader of the Pack, North Carolina State; Top Performer, Kansas State; Top Performer, Oregon State University; Top Performer Sun and Shade, Texas A&M

Growing Tips for COLORBLAZE®

- Establish in a warm environment. Plants subject to chilling may be stunted.
- 150-200 ppm fertilizer for optimal growth.
- One to two pinches can be used to increase branching and for shaping. For small container sizes, this may not be necessary; larger containers will probably require pinching. Florel® can increase branching and reduce flowering. Cycocel/B-9 tank mix or Sumagic® spray at 3-5 ppm will help control growth if needed.
- In growing group BC (see page 145).

A-PEEL® *Thunbergia alata*

Easier to handle than most rambunctious Thunbergias, these more restrained selections have an increased shelf life and sales window for growers and retailers. They are easy to recommend to customers looking to create a quick screen on patio trellises and chain link fences, and are excellent climbing components for combinations paired with other vigorous varieties. Requires a trellis in Royale™ containers.

Lemon A-PEEL® *Thunbergia alata* "Lemon Star" USPP14371
Clear lemon yellow flowers with a black eye dot the bright green foliage all season.

Orange A-PEEL®
Thunbergia alata "Orange Wonder" USPP14767
Vibrant orange flowers with a black eye dot the bright green foliage all season.

Tangerine Slice A-PEEL®
Thunbergia alata "DL1501" USPPAF CanPBRAF
Orange and yellow bicolor flowers with a black eye dot the bright green foliage all season.

Trellis available for 1.0 GL Royale™

152-244cm (5-8') Vigor: 4

Growing Tips for A-PEEL®

- Prefers warmer production temperatures; avoid chilling.
- These plants are vigorous; monitor containers regularly to keep twining stems at bay.
- Do not use irrigation frequency to control plant size. Drying to the point of wilt will cause leaf burn and drop. Can be run a little dry but not to the point of wilt.
- Scout for spider mites and whiteflies, especially when held for long periods before sale.
- It is suggested that a 12-18" high trellis that attaches to the edge of the Royale (1 GL) container be used to provide climbing support and added value.
- 200-250 ppm fertilizer for optimal growth
- In growing group CB. (see page 145).

Notes: Treat with a preventative broad spectrum fungicidal drench 1-2 weeks after transplant. Pinch 7-10 days after transplant. An additional 1-2 pinches may be needed for larger pot sizes. B-Nine may be used at 1500-2500ppm two weeks after transplant. Bonzi is also effective. Check manufacturer label for approved rates and usage recommendations.

CATALINA® Torenia

Catalina Torenia will make a colorful addition to your shade collection, as they thrive and bloom in any amount of sunlight. They make great fillers in combination containers and work well in landscapes too. An extra helping of heat tolerance and oversized blossoms add to their appeal.

AWARD WINNER – CATALINA® Torenia

73 Awards including: Top Pick, Dallas Arboretum; Best Old Variety, University of Tennessee; Top Performer, University of Wisconsin; Top Performer In-Ground and Containers, Kansas State University

Growing Tips for CATALINA®

- Prefers warmer production temperatures; cold, wet conditions can slow growth.
- Light shade is best for optimal growth.
- 200 ppm fertilizer.
- Application of Florel® delays flowering 8-10 weeks.
- Catalinas are best for 4" production.
- In growing group CB (see page 145).

Notes: For all sizes of containers, pinch the liner 1-2 weeks after transplant; for containers larger than 6" and for hanging baskets, trim around the edge of the container as needed prior to spacing or hanging of the baskets. Should not need PGRs, as they are naturally compact.

SUMMER WAVE® Torenia

Synonyms for Summer Wave varieties include *fast*, *easy*, and *versatile*. Great as groundcovers, fantastic in window boxes and hanging baskets, and the ideal choice as spillers in containers, their deep, dark flower colors look amazing against a background of silver or lime green foliage plants.

Growing Tips for SUMMER WAVE®

- Prefers warmer production temperatures; cold, wet conditions can slow growth.
- Light shade is best for optimal growth.
- 200 ppm fertilizer.
- Application of Florel® delays flowering 8-10 weeks.
- Best in gallons and baskets.
- In growing group CB (see page 145).

Notes: For all sizes of containers, pinch the liner 1-2 weeks after transplant; for containers larger than 6" and for hanging baskets, trim around the edge of the container as needed prior to spacing or hanging of the baskets. 10-15 Sumagic® spray is effective on Summer Wave.

SUPERBENA® *Verbena*

LANDSCAPE 15-30cm (6-12") Vigor: 3

Screened and selected for their robust vigor, large flower clusters and exceptional resistance to powdery mildew, you won't find better verbenas than Superbena. They present beautifully in 4.25 Grande™ containers, are essential components of dynamic container recipes, and make a colorful groundcover.

SUPERBENA SPARKLING® Amethyst Improved *Verbena* *** USPPAF CanPBRAF

Trial managers have been especially impressed with the enduring garden performance of this improved verbenas. Large clusters of amethyst and white flowers appear early and continue to bloom prolifically all season without deadheading. Improved this year.

SUPERBENA SPARKLING® Rosé *Verbena* 'RIKAV52102' USPPAF CanPBRAF
Replacing Superbena Sparkling Ruby this year, this new selection features larger flower clusters and exceptional resistance to powdery mildew. Light and dark pink bitone flowers appear early and bloom prolifically all season without deadheading. New this year.

Growing Tips for SUPERBENA®

- High light in production is essential.
- 150-200 ppm fertilizer.
- Preventive fungicides recommended one week after transplant.
- Low pH and severe dry down can cause iron toxicity if supplemental iron has been applied.
- In growing group BB (see page 145).

Notes: For all sizes of containers, pinch the liner 1-2 weeks after transplant; for containers larger than 6" and for hanging baskets, trim around the edge of the container as needed prior to spacing or hanging of the baskets. Growth can be controlled using lower temperatures. Although Superbena is more resistant than most, powdery mildew can be a problem in poor growing environments. A routine preventative spray program is encouraged.

Easiest SUPERBENA® to Grow –

Propagators recommend Royale varieties as the easiest Superbena to grow in a 4.25 container.

ANNUAL COLLECTION

SUPERBENA ROYALE® *Verbena*

LANDSCAPE 15-30cm (6-12") Vigor: 3

The upright compact habit of the Royale series makes it great for Grande™ container production, but it still becomes a vigorous, spreading plant for the consumer. Superb shelf life, yet strong garden performance make Royale varieties stand out.

- Superbena Royale® Cherryburst
- Superbena® Large Lilac Blue
- Superbena® Pink Shades
- Superbena® Stormburst
- Superbena Royale® Iced Cherry
- Superbena® Scarlet Star

METEOR SHOWER®

Verbena bonariensis

LANDSCAPE 51-76cm (20-30") Vigor: 3

An updated look for the species, Meteor Shower® has a more compact, dense and vigorous growth habit which equates to more manageable and attractive plants as a flowering thriller in finished containers and massed in the landscape. And since the plants set little seed, it won't spread around the garden like most Verbenas of this type.

Growing Tips for METEOR SHOWER®

- High light levels are required in production.
- 150-200 ppm fertilizer for optimum growth.
- Good air circulation, water management practices, control of humidity, and good sanitation practices are critical.
- This plant sets little viable seed.
- In growing group BB (see page 145).

Notes: Pinch at 1-2 weeks after transplant if needed. To hold a crop for later delivery, an additional pinch or trim can be applied. Treat with a preventative broad spectrum fungicidal drench at 1-2 weeks after transplant. Scout crops regularly (at least once a week) for disease development.

AWARD WINNER –
METEOR SHOWER® *Verbena*
31 Awards including: Top Performer, Colorado State University; Top Performer, University of Minnesota-Morris; People's Pick, Texas A&M
